Rodin® Bond Dental Adhesive System

1. **Enhanced adhesive performance.** Rodin Bond's superior adhesion ensures strong and durable bonds between dental materials, producing shear bond strength values greater than 72 MPa.
2. **Versatility.** This adhesive is compatible with a wide range of dental materials, including light-cure and self-cure composites and 3D printed restorations, providing versatility for a variety of dental procedures.
3. **Ease of use.** The user-friendly designs of the one-hand bottle and unit doses simplify bonding procedures, saving time and effort for dental practitioners.
4. **Reduced sensitivity.** When used with SensiGuard™ desensitizer, Rodin Bond is designed to minimize postoperative sensitivity—even for patients with a history of experiencing it.
5. **Reliable results.** Dental professionals can trust Rodin Bond to consistently deliver strong, predictable bonds that contribute to the success and longevity of dental restorations.

"When it comes to Rodin Bond, Pac-Dent took an uncompromising approach to developing a bonding agent. They went back to what's been proven to work and then improved upon it."

Joshua Grenier, DMD, MS
Coventry, Rhode Island

Specifications

Available in: Bottle Kit and Unit Dose Kit

Unit Dose Refill: 100 × 0.1 mL unit doses/kit

Bottle Refill: 1 × 5 mL bottle/pk
